

5 Reasons to Choose Typemock

It makes unit testing easy to do

Unit testing does not have to be hard, not when you're using the proper tools. [Isolator 2010](#) guides you with intelligent code completion to write better tests quickly. It's fully documented, has discoverable APIs developers pick up immediately and clear error messages - everything the developer needs to start unit testing now.

Get your company unit testing

If it wasn't hard enough to start unit testing for a single developer, getting the entire organization geared towards writing unit tests may seem like a daunting task. Typemock gives you the tools you need, such as [Teammate](#) and [Test Lint](#) to help the organization get started. Teammate shows you where your developers are, and Test Lint makes your tests clear, readable and concise. With the Typemock tool set, your transition will be successful.

No boundaries

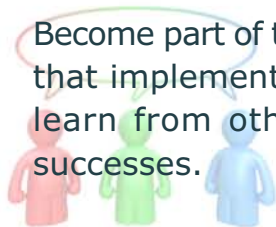

[Typemock Isolator 2010](#) helps you test the code the way it is written. Whether its code you can't change, legacy code you don't dare to touch, or new code you're writing, Isolator helps you test it. Design the code as it should be, and then test it. Creativity should not be traded for testability.

Get the best support from the experts

Every tool needs to be backed up by an excellent support team. Typemock experts not only do that - they can help you with their knowledge on how to write better tests, improve the usage of the tools and make the most of them. Get quick answers, continue to test and improve.
